Work Experience

Backend Developer | Feb 2024 - Mar 2024

Simplified Practice

Development of a recipe website project utilizing the YouTube API and tools such as PHP, Laravel, and Sanctum for cookie-based authentication, role management, and cloud hosting; the project includes video playback and comments for each video, along with the implementation of client-side logic.

Backend Developer | Mar 2024 - Apr 2024

Moa Travel

Under the guidance of a senior developer, I worked on a monolithic project using Python (FastAPI), SQL (PostgreSQL), and Docker, handling the implementation of controllers, routes, and cloud services such as AWS S3 to support the business logic of a travel company.

Backend Developer | Jun 2024 - Dec 2024

NextStation Chile

Responsible for managing various components of microservices-based projects built with Python/FastAPI, SQLAlchemy, PostgreSQL, and Docker, I developed controllers, routes, and services to handle business logic for a solar panel company and a church management API, integrating Apple and Google login via Firebase.

Software Developer | Mar 2025 - Sep 2025

Leadgrowth

I handled the development, planning, and integration of various services across different platforms, specifically GoHighLevel, utilizing tools such as EC2, S3 buckets, Hostinger, and Nginx for hosting. I used Docker for the VPS where the created APIs were deployed. Regarding the codebase, I used Python as the primary language with FastAPI as the main framework, and employed PostgreSQL and MySQL for databases. For architecture, I primarily utilized monolithic and hexagonal patterns, optimizing client and data flows and increasing productivity by 80% based on the data obtained; for certain workflows, I implemented n8n for automation, integrating the ChatGPT API and DeepSeek R8.

Web Developer | Sep 2025 - May 2026

Freelance

I was part of a cross-functional team responsible for developing an AI-powered platform for intelligent product processing. The team operated under an Agile model, utilizing continuous integration and automated deployment.

I collaborated on integrating language models (OpenAI API, Gemini) into the product processing workflow, using OpenAI Batch for high-volume asynchronous tasks. The team defined the prompts and the validation logic for the AI-generated results.

I participated in designing and deploying services using AWS Lambda, EC2, ECS, ECR, API Gateway, Cognito, S3, and CloudWatch. This enabled the team to automatically scale based on product pipeline demand.

Working with the data team, I implemented a workflow where raw product data was transformed using RAG (Retrieval-Augmented Generation). Each stage of the pipeline validated that the AI processed the information correctly and generated results aligned with business requirements.

I also participated in backend development using Python and FastAPI and collaborated closely with the frontend team working with React and TypeScript/JavaScript to visualize pipeline results.

I assisted in managing MongoDB to store pipeline states, facilitating auditing and failure retries, and helped configure GitHub Actions to automate testing, builds, and deployments, thereby reducing manual errors and accelerating team delivery.

Skills:

- **Python:** FastAPI, Django, SQLAlchemy: Medium/Advanced
- **JavaScript:** Node.js, TypeScript, Express, Vue.js, React.js: Beginner/Medium
- **PHP:** Laravel, Sanctum, Eloquent: Beginner/Medium
- Knowledge of design patterns and clean architectures

Databases:

- **PostgreSQL / MySQL / MariaDB:** Medium/Advanced
- **MongoDB / Firebase:** Medium

DevOps/Cloud:

Docker, GitHub, GitLab, Google Cloud Platform, EC2, ECS, ECR, API Gateway, Cognito, S3, CloudWatch, Nginx

Education

Instituto Universitario de Tecnología Industrial "Rodolfo Loero Arismendi" (IUTIRLA)

Languages: English C2, Native Spanish, French B1
