Work Experience

Backend Developer | Feb 2024 - Mar 2024
Practice

Developed a recipe website project using the YouTube API and tools such as PHP/Laravel/Sanctum for cookie-based authentication, role management, and cloud hosting. The project included video playback and comments for each video, along with the implementation of client-side logic.

Backend Developer | Mar 2024 - Apr 2024
Moa Travel

Under the guidance of a senior developer, I worked on a monolithic project using Python (FastAPI), SQL (PostgreSQL), and Docker, building controllers, routes, and cloud services such as AWS S3 to support the business logic of a travel company.

Backend Developer | Jun 2024 - Dec 2024
NextStation Chile

Responsible for managing various parts of microservices-based projects structured with Python/FastAPI, SQLAlchemy, PostgreSQL, and Docker. I created controllers, routes, and services for the business logic of a solar panel company and for a church management API, integrating Apple and Google login, also using Firebase.

Backend Developer | Mar 2025 - Sep 2025
Leadgrowth

I was responsible for the development, planning, and integration of various services across different platforms and one in particular called GoHighLevel, using tools such as EC2, S3 buckets, and Hostinger for hosting; I also used NGINX and Docker for the VPS where the APIs were deployed. In the code, I used Python as the main language with FastAPI as the framework, PostgreSQL and MySQL for databases, and mainly monolithic and hexagonal architecture; for some workflows I used n8n for automation, including the ChatGPT API and DeepSeek R8.

Web Developer | Sep 2025 - May 2026
Discoverist AI

I was part of a cross-functional team responsible for developing an AI-powered platform for intelligent product processing. The team worked under an agile model, with continuous integration and automated deployment.
I collaborated on integrating language models (OpenAI API, Gemini) into the product processing workflow, using OpenAI Batch for high-volume asynchronous tasks. The team defined the prompts and the validation logic for AI-generated results.
I participated in the design and deployment of services on AWS Lambda, EC2, ECS, ECR, API Gateway, Cognito, S3, and CloudWatch. This enabled the team to scale automatically based on product pipeline demand.
Together with the data team, I implemented a workflow where raw products were transformed using RAG (Retrieval-Augmented Generation). Each stage of the pipeline validated that the AI processed the information correctly and generated results aligned with business requirements.
I also participated in backend development with Python + FastAPI and actively collaborated with the frontend team on React + TypeScript/JavaScript to visualize the pipeline results.
I collaborated on managing MongoDB to store pipeline states, facilitating auditing and retries on failure, and contributed to configuring GitHub Actions to automate tests, builds, and deployments, reducing manual errors and accelerating the team's delivery.

Integration Developer | Aug 2026
creativoenlinea.com

Development of integrations and process automation for clients and agencies, connecting their platforms with third-party APIs and defining business workflows using GoHighLevel and Python.

Software Developer | Sep 2026 - present
wmeagency

I was part of a 35-person team (backend, frontend, data, and infrastructure) that built and migrated an internal CRM and operations platform for a talent agency, used by 2,000 employees, with a layered architecture and continuous deployment using GitHub Actions, Turborepo, Docker, and Helm on Kubernetes.
I participated in the architecture of a TypeScript monorepo with independent gRPC services, each with its own PostgreSQL schema, versioned migrations, and protobuf contracts, applying the strangler fig pattern to extract functionality from a legacy .NET/MSSQL CRM without stopping operations. On the frontend, I built the web layer in Next.js with React and TypeScript (shared design system, BFF with tRPC, and tools for contacts, search, offers, and operational control), and on the backend, services with Kysely over PostgreSQL, transactions, the outbox pattern, and a contact identity graph with field-level provenance and conflict resolution.
With the data team, I implemented an AI document pipeline that validates each stage before persisting the result (classification with tool use and prompt caching, extraction with Zod-derived JSON schemas and PDF OCR, with state for auditing and retries), as well as feature flags with percentage rollouts and fail-closed evaluation, a PII vault with envelope encryption and key rotation in Azure Key Vault, and search with Algolia using incremental ETL.
In infrastructure, I participated in deployment on Azure (AKS, Container Registry, PostgreSQL with Entra ID, Blob Storage, and Key Vault with Managed Identity) and in a shared Helm chart that standardizes deployment and scaling; I configured CI/CD with SBOM, vulnerability scanning, and image signing. Authentication is handled with Microsoft Entra ID and short-lived JWT tokens between layers, so that no layer accesses another layer's database directly.

Skills

- **Python:** Python3, Django, FastAPI, SQLAlchemy, Pydantic
- **TypeScript / JavaScript:** Node.js, React, Next.js, tRPC, Express, Vue.js
- **PHP:** Laravel, Sanctum, Eloquent
- **Architecture:** layered, hexagonal, clean, strangler fig, gRPC microservices, monorepos, outbox, feature flags
- **Infrastructure:** Docker, Kubernetes, Helm, Turborepo, GitHub Actions, CI/CD (SBOM, vulnerability scanning, image signing), Azure, AWS, GCP
- **AI and automation:** Anthropic Claude (tool use, prompt caching), OpenAI API, Gemini, RAG, OpenAI Batch, OCR, n8n, DeepSeek
- **APIs and security:** gRPC, Protocol Buffers, REST, webhooks, JWT, Microsoft Entra ID, Key Vault

Overall level: intermediate/advanced; beginner/intermediate in PHP, MongoDB, and Firebase.

Databases

PostgreSQL, MySQL/MariaDB, MongoDB, Firebase, Algolia, pg-boss, versioned migrations, and modeling with Kysely and SQLAlchemy

Education

Instituto Universitario de Tecnología Industrial "Rodolfo Loero Arismendi" (IUTIRLA)
Languages: English C2, Native Spanish, French B1
